

**ENHANCING TOURISM DIGITAL TWINS WITH REAL  
TIME, BILATERAL DATA ACROSS SRI LANKA**

Today's tourism digital twins often stay frozen in time—they don't update with real data.

This means visitors and managers miss out on real-time insights and interactive experiences.

Most tourism apps can't offer smart guidance or predict what's coming next, making the experience outdated.

# Introducing Ceylon Twin

Our research focus on developing a Digital Twin for Sigiriya, which is a smart virtual model that helps monitor, predict, and guide visitor activities using AI and data analytics.

# SIGIRIYA

Dambulla, Sri Lanka

An aerial photograph of the Sigiriya rock fortress in Sri Lanka. The image shows the massive, dark rock structure with its terraces and ancient ruins. The surrounding landscape is lush green, and the sky is a clear, pale blue. The text is overlaid on the upper right portion of the image.

This system helps site managers at Sigiriya make better decisions by providing real-time monitoring, future crowd and weather predictions, and data-driven insights for safer and more efficient visitor management.
